range: naive 10.5 km, symmetric 0.15 m
mean semi-major axis − ($R_E + h$) [km]
initial argument of latitude u_{jk} [deg]
naive (same osculating circle)
symmetric (Eq. 13)
symmetric only, std = 0.049 m
mean semi-major axis minus its average [m]
initial argument of latitude u_{jk} [deg]
